PROFESSIONAL SUMMARY

Full-stack engineer with production experience across backend (Java/Spring Boot, Node.js), frontend (React/Next.js), and mobile (Flutter) development, most recently building systems for a 500+ vehicle EV fleet platform. Strong foundation in REST API design, system architecture, and observability, with a background in digital strategy and UX providing an end-to-end view from data model to dashboard. Comfortable owning features independently, from API design through CI/CD deployment and AI-agent integrations used daily by operations teams.

SKILLS

Backend

Java (Spring Boot), Node.js (Express), Python (Django), REST API design, PostgreSQL, MySQL, SQLite, MongoDB

Frontend & Mobile

React, Next.js, TypeScript, JavaScript, Flutter (Dart), React Native (Expo), HTML/CSS, Tailwind CSS

DevOps & Cloud

AWS (EC2, RDS, S3), Docker, CI/CD, Git, Windows Server IIS Administration, NSSM

Observability & Tools

Grafana, Loki/LogQL, Postman, Zoho CRM Integration

EDUCATION

Moringa School

Software Engineering, 2023 – 2024

Udemy

Full-Stack Development & UI/UX Design
Digital Marketing Certification

LANGUAGES

English (Proficient)
Swahili (Native)
French (Beginner)

PROFESSIONAL EXPERIENCE

Software Engineer

Spiro (Africa Smart Mobility Solutions Kenya Ltd.) Jun 2025 – Jun 2026
Nairobi, Kenya

- Built full-stack features for Spiro Horizon, an enterprise fleet management platform supporting 500+ electric vehicles across East Africa, working across a Java/Spring Boot backend and Flutter dashboards.
- Designed and shipped REST APIs powering real-time vehicle telemetry, battery status, and payment/wallet workflows, including reconciliation logic for transaction flows.
- Root-caused and resolved a production payment-processing defect traced to a Zoho CRM (COQL) query issue affecting Kenya transactions, restoring transaction visibility for the operations team.
- Used Grafana and Loki/LogQL to monitor production services and debug backend and IoT data-flow issues, cutting time-to-diagnosis on operational incidents.
- Led UX/UI design for agent and admin dashboards, translating raw telemetry and KPI data into decision-ready interfaces for fleet and battery operations teams.
- Containerized services with Docker for consistent dev/deploy environments and integrated Zoho CRM into core operational workflows.
- Partnered with product, operations, and engineering stakeholders to align system functionality with real-world fleet and agent workflows.

Software Engineer & Digital Strategy Lead

Afrosoftware 2023 – 2026
Fully Remote

- Designed and built GoDriving.xyz, a gamified driver-education platform and 2D simulator for African roads, using React 18, Vite 6, Tailwind CSS v4, Node.js/Express, and PostgreSQL.
- Developed multiple interactive 2D game modes (Sign Match, Road Run, Highway Code Quiz, driving-simulation lessons) with custom JavaScript game engines and CSS keyframe animation.
- Standardized OAuth/OpenID Connect authentication across the Afrosoftware web ecosystem (GoDriving, ZawadiHub, Foodlog, and company sites) using NextAuth/Auth.js and Google Identity Services.
- Migrated legacy Wix sites (e.g. YorkXpress) to modern Next.js applications, deploying to Windows Server 2025 IIS with custom reverse-proxy architectures (URL Rewrite + NSSM) to run Node.js apps as persistent services.
- Deployed AI agent infrastructure (OpenClaw, Hermes Agent) as persistent background services integrated with OpenRouter APIs for automated operations and marketing content workflows, with a Telegram-based command gateway (BotFather API) for secure remote administration.
- Implemented regex-based log redaction to mask sensitive tokens (Stripe, AWS, DB URIs, JWTs) across server gateways and system transcripts.
- Maintained full-stack apps and PostgreSQL/SQLite databases while driving SEO and performance improvements across client platforms.

Chief Technology Officer

Thinking Energy LLC May 2024 – Jan 2025
Remote

- Owned technology strategy and system architecture for an AI-enabled smart energy product, directing the technical roadmap from concept to implementation.
- Directed product positioning, branding, and go-to-market strategy alongside a cross-functional engineering, product, and marketing team.
- Used data analytics to guide product and business decisions in a fast-moving, resource-constrained startup environment.

Software Development & Digital Marketing

- Deliver end-to-end web applications and APIs for independent clients alongside full-time engineering roles, including e-commerce and digital-strategy projects.
- Design and run digital campaigns with analytics tracking, marketing automation, and performance reporting.

KEY PROJECTS

- Spiro Horizon Fleet Platform — Dashboards, operational workflows, and analytics for EV fleet and battery management across East Africa.
- KCB × Spiro Integration — API-driven integration between asset-financing systems and CRM for vehicle-financing workflows.
- GoDriving.xyz — Gamified highway-code learning platform with custom 2D driving games, simulated theory exams, and a driving-school directory.
- YorkXpress Rebuild — Led Wix-to-Next.js migration and IIS deployment with server-side rendering for localized vendor listings.
- OpenClaw Server Gateway — PowerShell-based background CLI service on Windows Server paired with a Telegram bot client for secure, authenticated remote execution with built-in token redaction.
- EatLog.app (Foodlog) — Full-stack nutrition-tracking app with NextAuth session management and custom APIs.
- **ZawadiHub** — Kenya gifting/registry platform (Next.js, React 19).
- **DoCall** — Browser-based customer service calling platform with AI concierge.
- **SoundPull** — Full-stack Spotify downloader (Python/FastAPI/React).
- **WorkGrids** — Internal workforce time-tracking platform for Afrosoftware (.NET/React).
